

FICT Greenhouse Gas Emission Reduction Targets

Environmental Policy: To realize a sustainable society, FICT set carbon emission and reduction targets and announce a progress as a measure against climate change.

Scope*	FY**2030 Goal	GHG*** Emission (CO ₂ ton)	
		FY2023 Result	FY2030 Target
Scope 1+2	29% reduction by FY2023	49,486	28,997
Scope3	To make suppliers who provide purchased products, services, etc. set SBT**** targets	121,971	TBD
Total		171,457	TBD

*Scope = A broad category of emission sources defined in the international framework for companies to calculate and reduce their greenhouse gas emissions (GHG Protocol).
Scope 1 = CO₂ emissions by the company (e.g., gas use) Scope 2: Indirect CO₂ emissions (CO₂ emissions by electric power companies for electricity use) Scope 3: Supply chain emissions (e.g., emissions by component suppliers)

**Fiscal Year

***Greenhouse gas

****SBT (Science Based Targets)

Setting a goal to limit the rise in global temperatures to within 1.5°C, which is the goal of the Paris Agreement
